

# Analysis of Stack Overflow Developer Survey Data

Joshua Reinacher

08. May 2023

# OUTLINE

---

- Executive Summary
- Introduction
- Methodology
- Results
  - Visualization – Charts
  - Dashboard
- Discussion
  - Findings & Implications
- Conclusion
- Appendix

# EXECUTIVE SUMMARY

---

In the following we present key insights and implications found by analyzing the **Stack Overflow Developers Survey (2019)**:

## Findings:

- popular **currently used programming languages, databases and developer tools**
- outlook of **It-tools which likely be popular in the future**
- **developers demographics**

➡ The findings are important for young developers, planning a career in IT.

# INTRODUCTION

---

The data is taken from the **2019 Stack Overflow Developer's survey**

- Link to Dataset: <https://stackoverflow.blog/2019/04/09/the-2019-stack-overflow-developer-survey-results-are-in/>
- A **randomized subset (size 11,398)** of the original **survey set (size 90,000)** was used for the analysis
- It contains information about:
  - used technologies
  - future trends
  - demographic data

# METHODOLOGY

---

- Saving and uploading the Dataset ([link on previous page](#))
- Data wrangling: A subset of the survey data was provided and cleaned (i.e. duplicate rows removed and missing data was replaced) by using Python.
- Data Analysis: Exploratory data analysis was performed again by using Python.
- Data Visualization: Data was plotted and visualized in several different ways by using Python as well as IBM Cognos

# FIRST RESULTS: DEMOGRAPHICS & INCOME

---

A quick analysis of demographics and compensation was performed:

- **Median age** of developers in the survey: **29 years**
- **Median income: 52,704 \$ per year** (man: 52,399 \$, women: 54,956 \$)
- **Ratio of gender** of respondents: **92.5% male, 6.5% female, 1% divers**
- **Correlation between age and income** (correlation factor 0.4)

# PROGRAMMING LANGUAGE TRENDS

Top ten languages, developers are using currently:

Top ten languages, developers are planning to use in the future:

# PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings:

- JavaScript, HTML/CSS & SQL are currently most frequently used languages by a margin
- JavaScript, HTML/CSS, SQL & Python are most aspiring languages

## Implications:

- Use of current languages reflects IT-topics which are popular right now:
  - JavaScript: used for development of web-based applications
  - HTML/CSS: used for creating websites
  - SQL: used for (big) data handling
- Future trend languages reflect which topics might become more important
  - JavaScript, HTML & SQL stay popular
  - Python: might reflect the upcoming importance of AI, Machine Learning & Data Handling

# DATABASE TRENDS

Top ten databases, developers are using currently:

Top ten databases, developers are planning to use in the future::

# DATABASE TRENDS - FINDINGS & IMPLICATIONS

---

## Findings

- MySQL, Microsoft SQL Server & PostgreSQL are most frequently used databases
- They stay popular, but MongoDB & Redis are gaining popularity and even surpass MySQL & Microsoft SQL Server

## Implications

- SQL Databases are currently more popular than NoSQL Databases  
--> currently more relational data stored
- NoSQL is becoming more important  
--> indicates the uprising of big data
- Future developers should focus on SQL as well as on NoSQL

# DASHBOARD

---

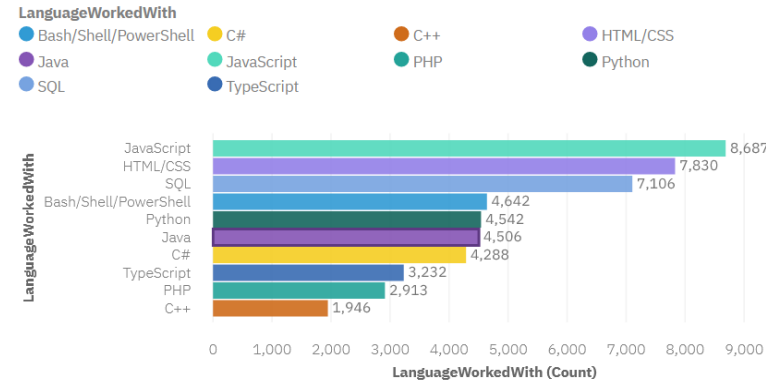

The following is the link to an extensive Dashboard, which visualizes the technology use of IT-Users and Developers as well as future trends in technologies and demographics:

[Link to dashboard of technology trends and demographics.](#)

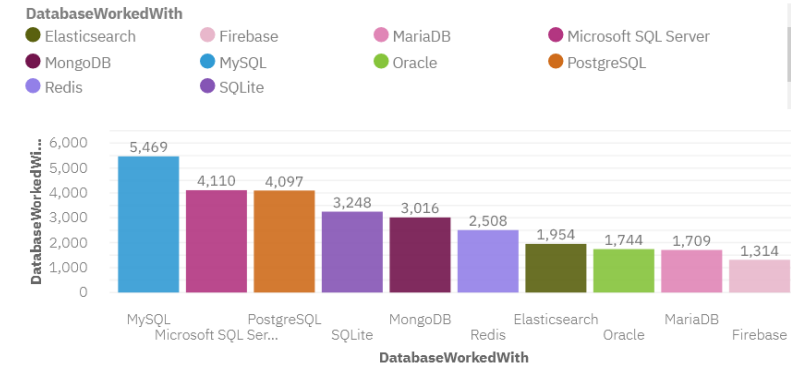

On the next three pages are the screenshots of the Dashboards.

# DASHBOARD TAB 1

Top ten languages developers use:

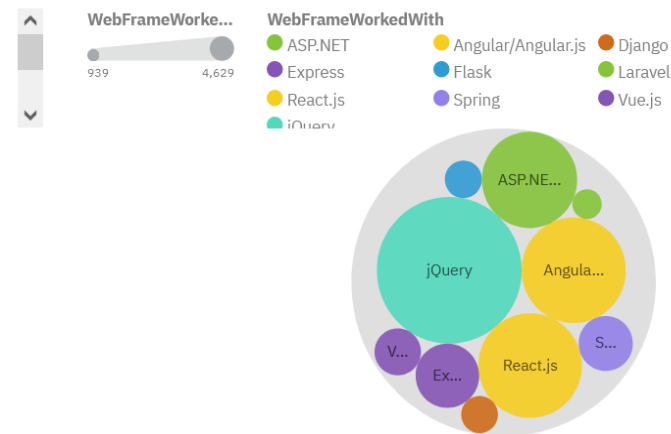

Top ten databases developers use:

Most frequently used platforms:

Most frequently used Web Frames:

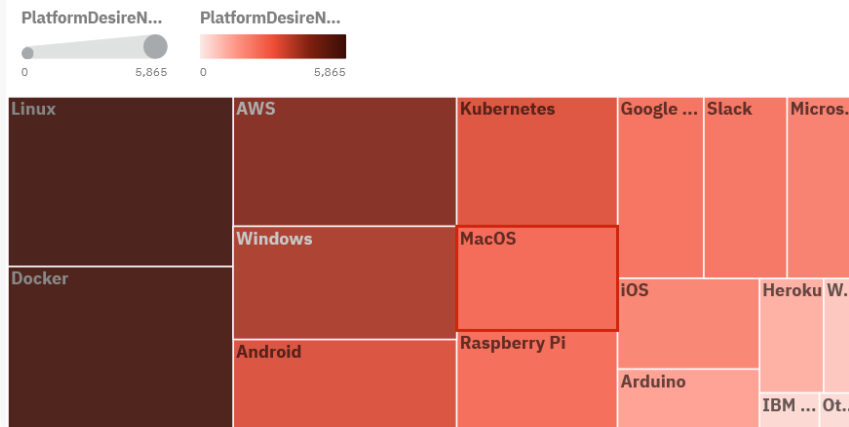

# DASHBOARD TAB 2

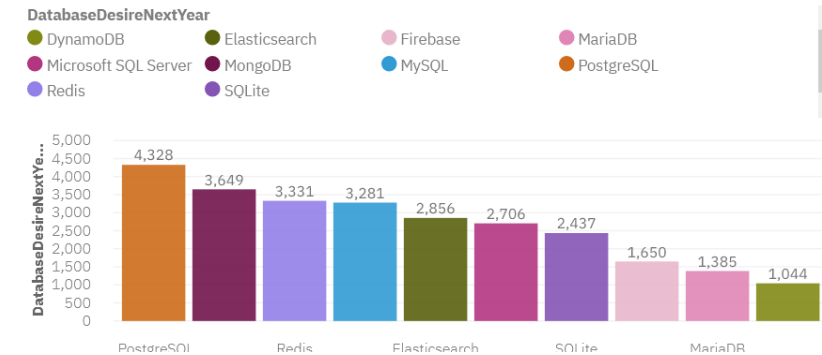

Top ten languages developers want to learn in the future:

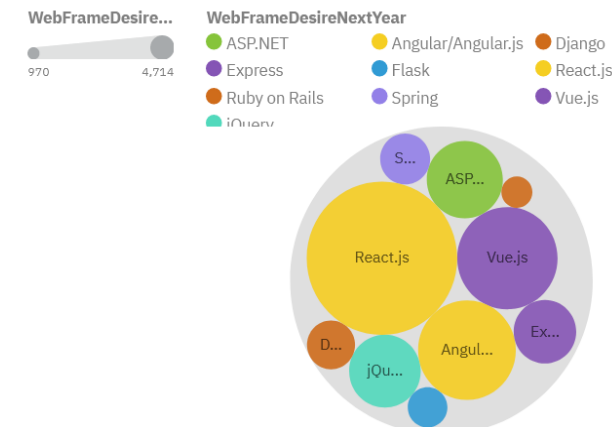

Platforms developers plan to use in the future:

Top ten databases developers plan to use in the future:

Top ten Webframes developers plan to use in the future:

# DASHBOARD TAB 3

Gender of developers:

Gender

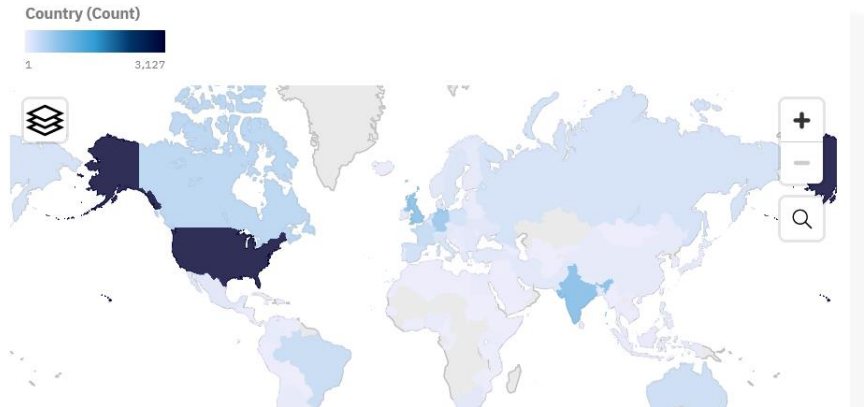

- Woman;Man;Non-binary, genderqueer, or g...
- Woman;Man
- Woman;Non-binary, genderqueer, or g...
- Man;Non-binary, genderqueer, or g...
- Non-binary, genderqueer, or g...
- Woman
- Man

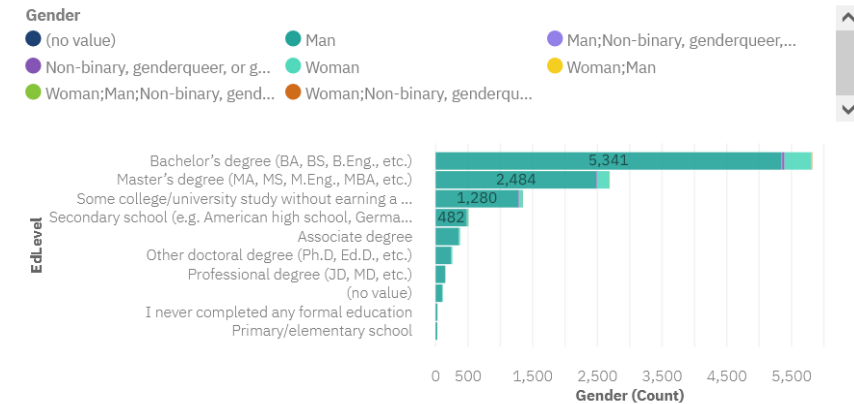

Age demography of developers:

Countries where developers live:

Education level by gender:

# DISCUSSION

---

- We gave insights into the demographics and compensation of developers
  - We showed which programming languages and databases most developers use currently and will be used in the near future
- ➡ We gathered important information for young upcoming professionals and developers who want to start a career in Tech.

# OVERALL FINDINGS & IMPLICATIONS

---

## Findings:

- JavaScript, HTML/CSS & SQL most frequently used
- JavaScript, HTML/CSS, SQL & Python are most uprisng languages
- SQL Databases are currently more important, but NoSQL Databases becoming more popular
- Man are demographically strongly overrepresented, although women have a slightly higher median income

## Implications

- Developers for web-applications and web pages as well as data experts are currently and in the future in high demand
- Use of Python indicates, that AI, ML and Data Analytics are fast growing fields
- (Big) Data is still a fast growing, developing and changing field

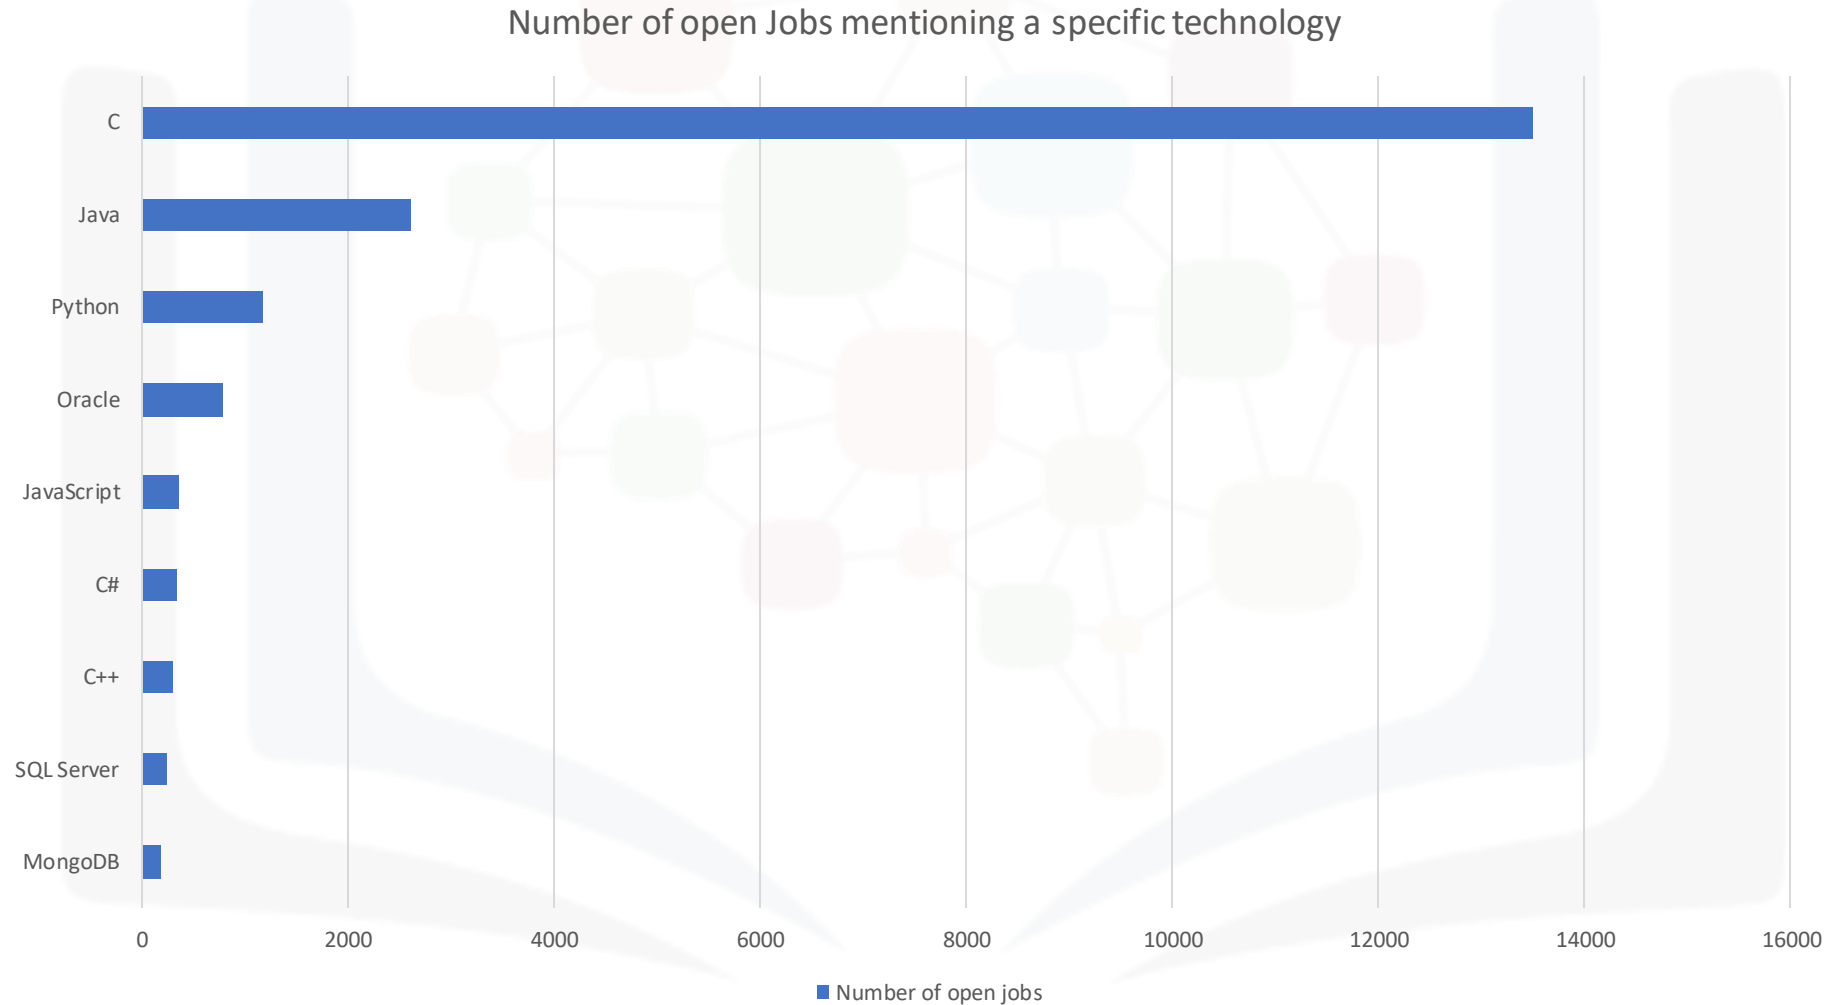

# CONCLUSION

---

- The broad field of IT is still a growing and developing field
- Developers and Companies have to pay close attention to the changes in technologies in order to stay competitive
- Judging from the Income statistics, the field of IT is a highly lucrative career
